

# DrainChexx® Inlet Filter Mat

- Provides top of grate sediment removal
- Lets water flow through while trapping sediment

## DrainChexx Advantages

- Porous surface area helps prevent flooding from clogged inlets
- Save time on installation, maintenance, and removal; reusable for future projects
- Use with SiltSoxx™ or EnviroSoxx® for curb opening protection & increased performance
- No attachment needed—engineered drain mat creates a suction to hold the mat in place on grate during rain events

The 100% recycled rubber drain mat and wood fiber (sourced through the Sustainable Forestry Initiative program) are tightly contained by Filtrexx DuraSoxx® Heavy Duty mesh to provide a strong, stable inlet filter mat. The mat helps to slow down water and trap sediment. The combination of mesh, fiber, and matting provides drain filtration, while allowing water to flow through. Available in standard 24" x 36" size; custom sizes available for minimum order quantities.
